Dear Sir or Madam:

I am wanting to apply for the Graduate Software Engineer. I am interested in working in a friendly environment and growing my knowledge of the software engineering using the java programming language. The company's focus on curators is a very forward way of thinking and was a big reason in why I am applying.

I am incredibly focused and dedicated to learning new skills, this would be key to a graduate position. I am friendly and aim to work well with others as well as building team skills to improve myself. I always strive to produce quality with everything I do and can offer dedication to keeping this quality.
